

LTH-301m-WIFI is a modern stylish intercom device with a compact design. The size is slightly larger than a computer mouse. It is sleek and professional looking when installed.

The LTH-301m-WIFI is developed based on technology from the LTH-M201-C. In theory, it can replace the LTK3500S in a few ways.

| 5 Card Reading Area | 10 Set Screw |

Terminal Wire Diagram:

Activation is Required: LTH-301m-WIFI requires WEB / IP Portal / NVMSv3 to activate and create the password first.

The default IP address is 192.0.0.65

1. Create admin Password & Activate.
2. Change the device IP address to connect the Internet.

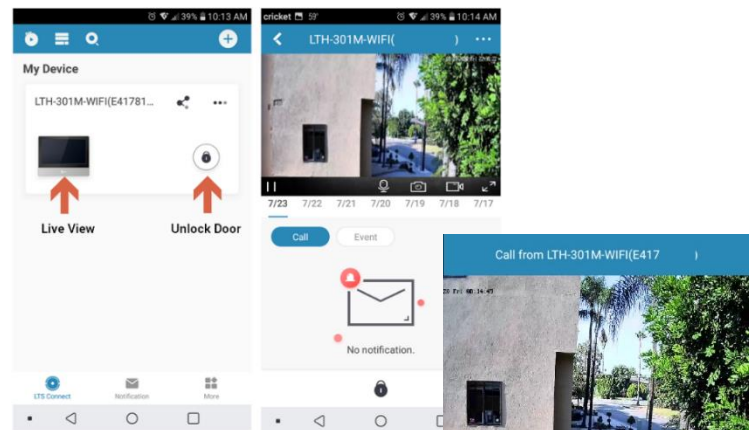

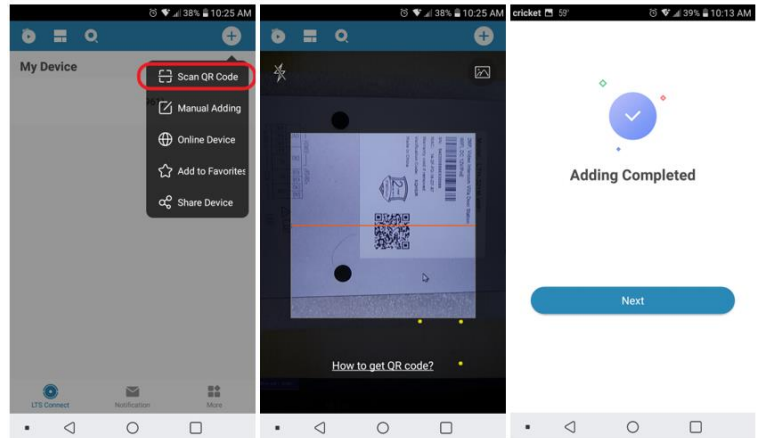

Mobile App: LTS Connect

Once you are connected to the internet, you can use the Mobile app to connect and call. To use the LTS Connect App, you need to finish the following first.

1. Connect the Intercom Device to the Internet
2. Download LTS Connect and Register an account by using Phone# or Email. Get the Confirmation code from Text / Email, create LTS Account Login Password.
3. Add the QR code to this account.
The QR code is located on the back of your device. A Verification Code is also printed there.

After you connect the intercom successfully, you can watch the Live View stream. The Microphone icon below the video stream allows you to talk 2-way with the camera without being on the call.

Use the Snapshot / Record icon to save footage onto your mobile device.

Calling Mobile App - Press the Call button

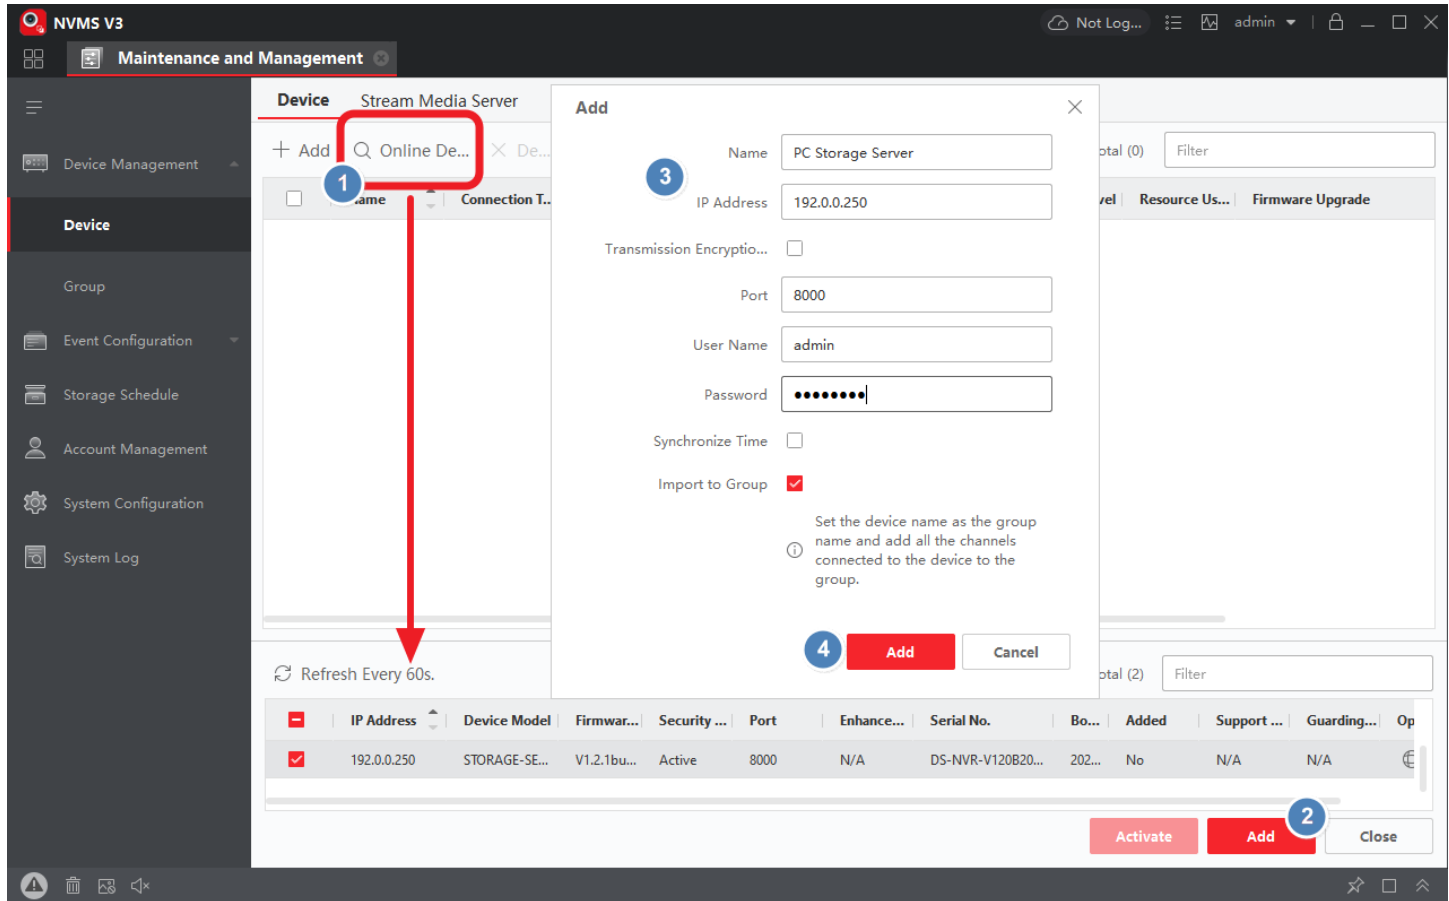

After setting up the Mobile App and connecting the intercom correctly, when you press the Call button, it will call the mobile app by default. If the intercom is not setup, you will get a 'Calling Failed' error message.

Install NVMSv3

After the NVMSv3 is installed, run the software. Go to Device Management, and click 'Online Device'. You should be able to see it from the local network section at the bottom of the page.

(NOTE: Set the IP address correctly for your network before adding it)

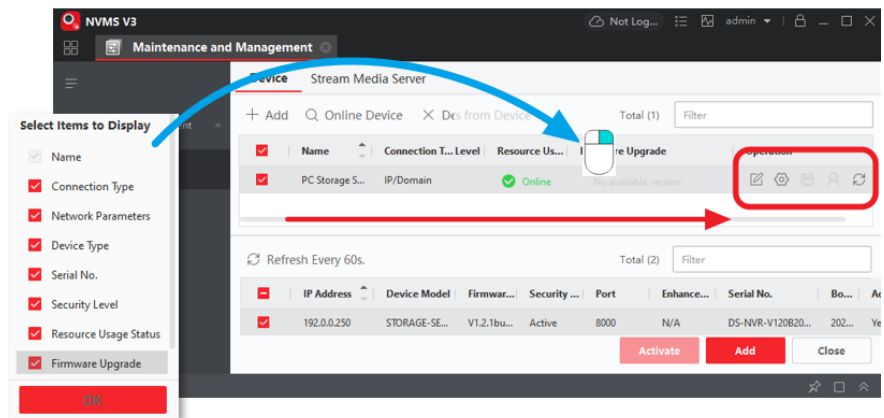

Remote Configuration

Make sure the device is **Online**.

Scroll to the right on the Device line item and you should see the configuration (operation) section.

(NOTE: If your screen is small and you do not want to scroll to the right side every time to access the Config button, you could customize the column (right click the header) to reduce the display column length. i.e: remove the 'Firmware Upgrade' column.)

Click the Configure button.

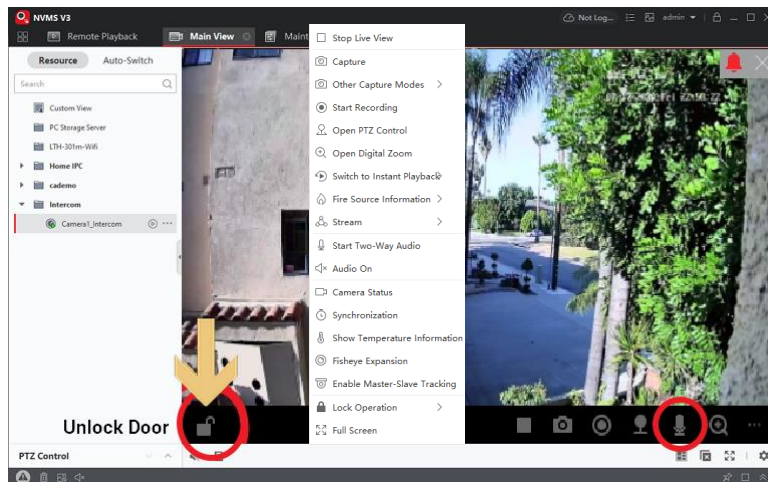

Main View & Unlock Door

After you have added the Intercom to the software, go to the Main View. Double-tap the device from the left panel to start the Live View. Hover the mouse on top of the video, you should see the function bar on the bottom of the stream (black area).

Unlock door button is on the left side of the function bar. (see the orange arrow)

Click the Microphone icon to perform 2 way communication with the intercom.

Change Calling to NVMSv3 Software

By default, the Intercom device is setup to call your Mobile App. This can be changed to call the NVMSv3 software if needed. Please note that the NVMSv3 software needs to be running to receive the call when the button is pressed.

To change the setting, go to the NVMSv3 Remote Configuration for the device or go to the Main Screen, click the Config button on the function bar (see top of right picture)

Go to **Intercom > Dial**.

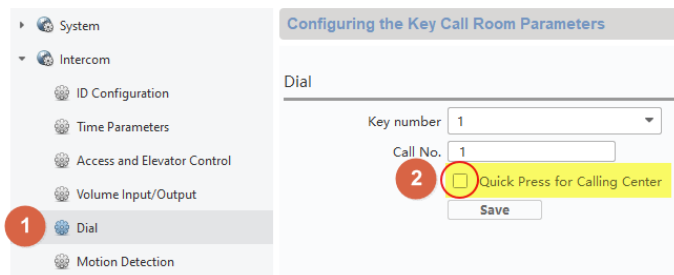

Enable 'Quick Press for Calling Center' Click Save.

When you press the call button on the intercom it will call the NVMSv3 Call Center software instead.

NOTE: If you change this function, the mobile app will no longer receive the calls until you revert this function back. The device cannot ring both the LTS Connect App and NVMSv3 software simultaneously.

Remote Configuration

Connecting the Indoor Station Intercom

There are two ways to point the Indoor Station to the LTH-301m-WIFI Intercom. This requires setting the Door station Master Address

1. NVMSv3
2. Indoor Station

In NVMSv3:

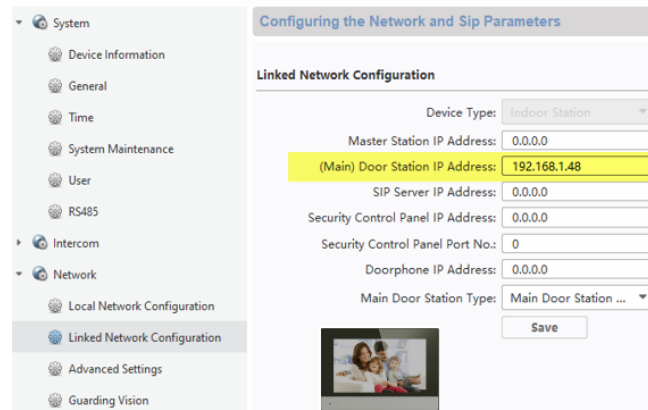

Remote Configuration of Indoor Station > **Network > Linked Network Configuration**.

Set the 'Door Station IP Address' to the LTH-301m-WIFI IP address.

On Indoor Station:

Click Settings > More (wrench icon on the right) > Configuration (log into the Indoor station with the password used to activate the device) > Device management (3rd icon on the right) and set the Door station IP address here.

Remote Configuration

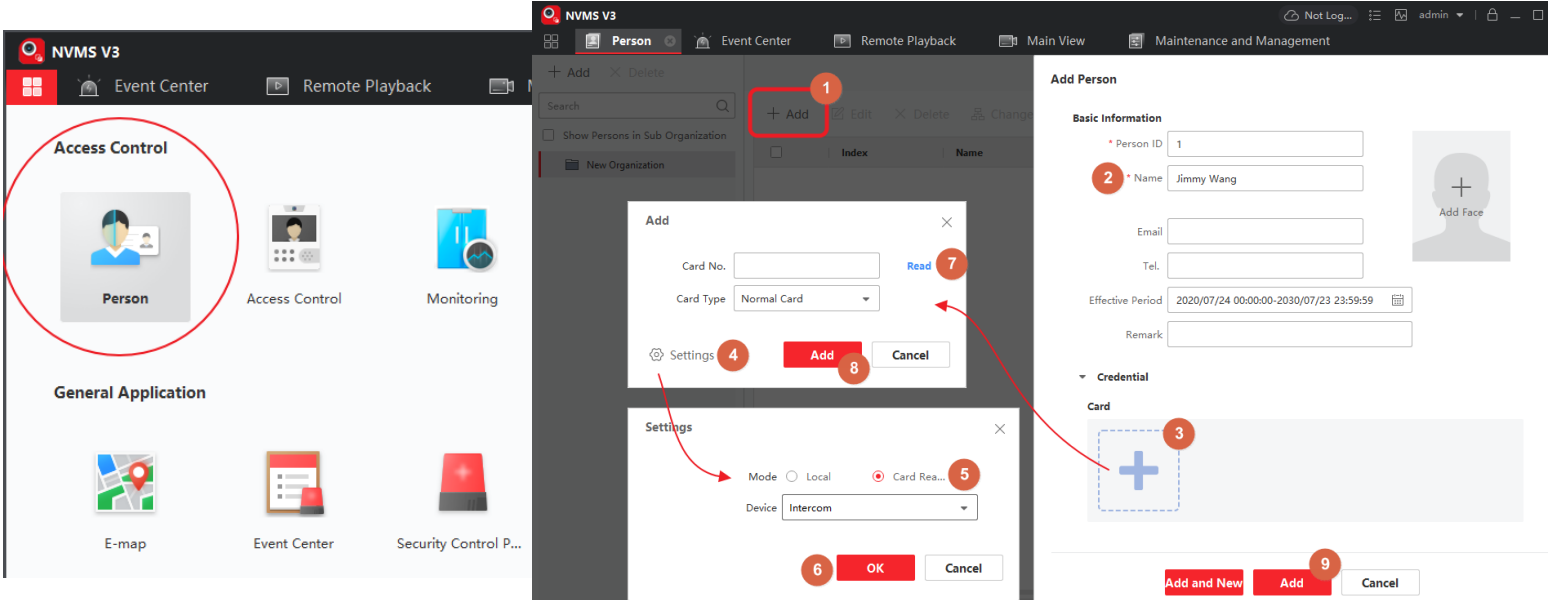

Program Card Access – Add Person

Go to NVMSv3. Click the Menu Icon > Access Control > **Person**

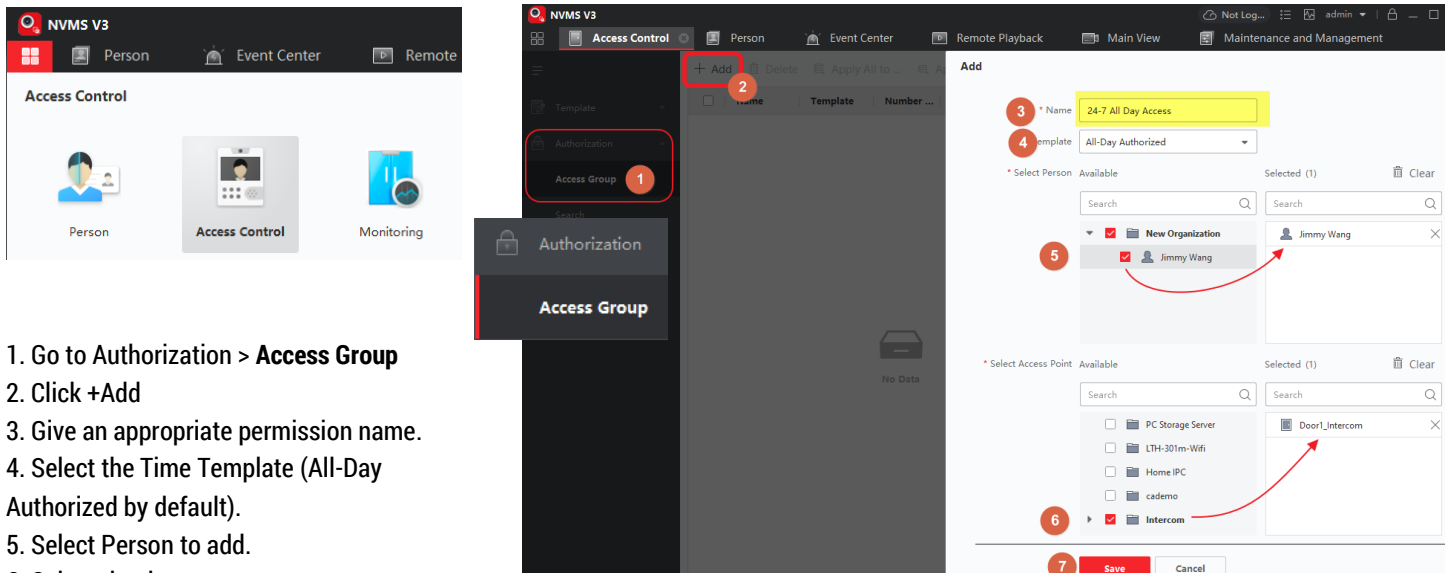

Click **+Add** to add a person... (Follow the steps 1,2,3, etc.)

On step #5, select your LTH-301m Reader to read in the card from the device. You can also manually type in the card number. A manually entered card number must match the physical card number itself.

Program Card Access – Add Permission

Go to the Access Control section

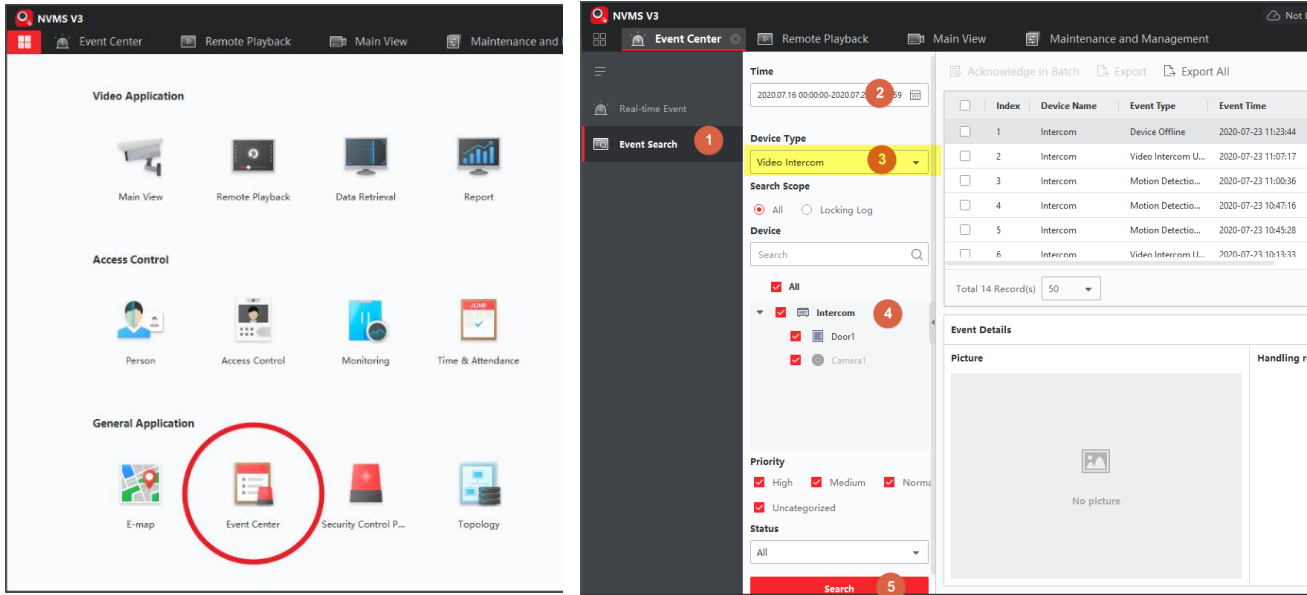

1. Go to Authorization > **Access Group**
2. Click +Add
3. Give an appropriate permission name.
4. Select the Time Template (All-Day Authorized by default).
5. Select Person to add.
6. Select the door.
7. Click Save.
8. Select the Permission.
9. Apply changes.

Event Logs

Event Logs are saved in the NVMSv3 PC system, it is not saved in the device itself. To retrieve it, you can go to the **Event Center**.

Then follow the Steps 1-5 to search. Make sure to select the **Video Intercom** in Step 3.

Video Recording

You can record or snapshot the video while you watch and save to your PC (see Pg4 Main View Picture)

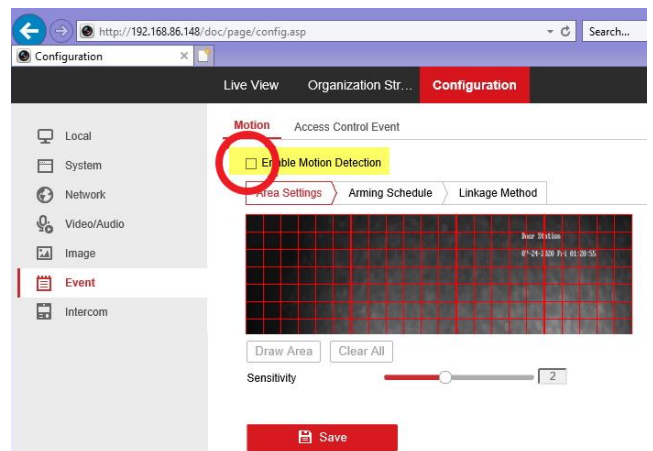

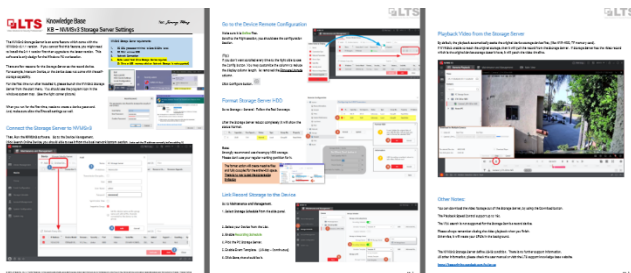

The LTH-301m-WIFI device does not come with a self-record storage function. (Note: The LTH-301m TF/SD card slot is disabled, and not used for recording purposes.)

If you want to do Motion Detection Recording, you need a DVR/NVR to record it. Make sure to turn on the Motion Detection in the 301m setting through NVMSv3 or through the Web Interface.

Or, if you want to use your PC to record automatically, you need setup the NVMSv3 Storage Server. If you are interested in storage server setup, please check the knowledgebase page from the link below.

FAQ

1. Q: Where can I find the user manual?

A: The LTS website or the knowledgebase page area.

<https://ltsecurityinc.zendesk.com/hc/en-us/categories/360004343213-Official-User-Manual>

2. Q: How do I factory default the device?

A: There is no physical default button for the LTH-301m device.

You may go to the Web interface or go to the NVMSv3 Remote configuration, under **Maintenance > Default**.

3. Q: Why does the LED button not light up?

A: The LED only lights up when the device detects it is dark out.

4. Q: Why is there an alarm sound when the device is powered on?

A: It is a Tamper Alarm. The LTH-301m requires the metal Tamper Plate to be installed. If it installed correctly, the alarm will not sound when powered up.

5. Q: How do I change the Microphone / Speaker Volume?

A: Through the Web Interface (see picture)

6. Q: How do I change the max call duration?

A: Through the Web Interface (see picture)

7. Q: Can you push the call button to call the Mobile App and NVMSv3 software at the same time?

A: The call button can only be pointing to one device at a time. Either the Mobile App or the NVMSv3 software (PC).

8. Q: Does the device support Push Notification for the Mobile App?

A: Currently, this is not available.

9. Q: Why can I see the stream and talk back but I can't unlock the door?

A: Network issue. Either not enough bandwidth or IP conflicted.

10. Q: Can I program the device to open the door based on a schedule?

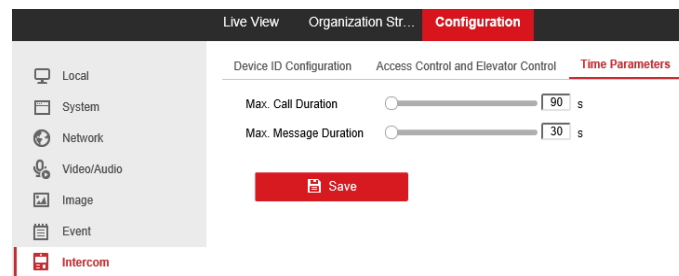

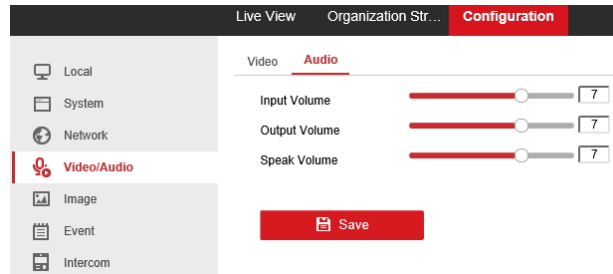

A: No. The Intercom does not support this feature. If you want to open a door based on a schedule, you will need an access control device. Intercom and access control are different products.

11. Is the camera ONVIF compatible?

A: No.

12. What is the TF/SD card slot (memory card slot) for?

A: It is a reserved slot that currently does not have a function.

Technical Post Note: Master Issue Card:

The package comes with a white card. It is the master issue card. The master issue is designed for No Network environment.

However, you still need to use a PC to activate the device for the first time. The issued card is helping to program the access card without PC. Just simply Tap Master issue card – Programming, Tap – New Card, And end the Tap Master issue card to finish it. The master issue card is unique per device and binds to the 301m device. It is not compatible with any other device. LTS is not provided any support or warranty when you lost the card.
